

Freedom

Please remember for resolving these important matters with sensible , freindly , diplomatic peace & legislation .

If enough of the only necessary businesses & industries are unitedly used for that each citizen (or & being-s) of the USA (or & of the universe) is wisely all the time issued FREE all necessary items & services that we need (& currently qualify for) {using a I.D. account access card-s (status orderly)} then robots could work (what) jobs (they could) instead of we living beings also then the unnecessary jobs could be shut down then & the remaining jobs that robots are not yet able to do yet could be devided into smaller time periods by using the surplus of workers that is created from (conveniently re-training) (freed) people . Such is the 8 hour day could be devided by 2 or 4 workers making it a 2 hour day then the age of retirement could be lowered also the days of the week , the weeks per month & months per year could all be devided into smaller time periods . When robots is able to do all the jobs of what they only should instead of we living beings then we living beings would only need conveniently (goto) school . Though home work from school could be obsoleted , since at the begining of each (55 minute) class period each school day , each student could do a nonpolymimicry 5 to 10 minute test memory exercise level-s based on what each individual class period is about {if a education race (war) does not occur since then qualified volunteers or (&) draftees would be needed for doing home work from school} then for the remaining class time a (45 to 50 minute) lesson is taught based upon what the class is about . Instead of less important studies it is figured that (symplified) medical science technology should be taught properly during each grade level for that immortality could be more likely for each & every (living) being also for that we are truely pretty ! Though nonpolymimicry learning how to use technology for good & not evil is properly-includingly suppose to be taught properly durn each grade level since if any could not yet pass such important safety lessons then must instead learn safer , stabler though real educations that are alturnative to risky technologies lesson-s until when passes the propper safety test includingly for using (tech-tools for) good though not evil !

Based upon the right to persue love & happiness , that of which is not to be infringed upon ; It is figured & since if a person is truely sexualy educated well enough then that sexual anti age discrimination be resolved for such ! Hence if a person no matter what age they are , if understands fairly well enough 1) mutual conscent 2) the potencial consequential risk of sexual involmment-s such as how to fairly well enough screen out (possible) significant sexual transmited diseases & if understands fairly well enough how to handle the responsibilities of pregnantcy ' & child birthing or & at least a fairly little enough about child raising' (unless sterole) 3) if understands how to do it right , like safely cleanly inserting the hard penis into the mutual conscentual , juicy , wet , tender vagina ; then if such is understood hence if neither is it polymimicry then a person no matter their age should be given their constitutional right to persue love & happyness all the way thus yes such a person should be given the right to have mutual conscentual sex with whom else is understanding sex

education well enough !

Further more though I myself does not do unhealthy drugs & neither does I beleive that any one should , although it is noticed that people whom do drugs are not realy suppose to be (mistakenly) classified as crimminals since they are not truely crimminals only because they are addicted to a drug-s & neither are they realy crimminals if some times does a drug-s therefore it is figured that some how drugs should be sensibly leaglisd though NOT PUSHED for that people could get help for getting off drugs & with out being wrongly labled crimminal , being further victomised wrongly imprisoned losing freedom & propertise unfairly seized & some times (in some places) wrongly being put to death ; also understand that our brave , heroic officers of the law should not have to be shamed into enforcing flawed law-s making them seem as pirates , despite such please remember for resolving these important matters with sensible , freindly , diplomatic peace & legislation !

We are not truely FREE unless our minds is free from being wrongly probed & controled by others than our own self ! Thus some kind of propper , currently qualified regulations-law-s & police , security , milatary defences { for the public & private citizens (or & guest-visitors) } such as radio jammers , radio detection & radio tracking devices must be re-currently devised for protecting we people against the (especialy intentional) wrongful use of radio war fair , including against wrongful mental controle-spy-probes , hence against invaders of our privacy ! Though only for when truely needs there should be also currently enough , safe-good counter intelligents guides that is properly healthy enough & well mannered to protect against wrongful controle take overs or & programming . For example if a person is wrongly controled to make more jobs instead of real freedom then as neccessary they should be properly healthily enough re-guidance controled properly to instead have it be that this TRUE FREEDOM ECONOMICS... is succceeded with ! 'There includingly should also be devised free healthy (radiological) medical (surgery-s) defences that protect that we are truely pretty , healthy , modurnly wise , youthful beings & defended from being made to be (look) sick , old , ruined or (&) ugly !'

I understand how we could accomplish this (economic part) very well & offer my verble or (&) written data-type extra copies for helping our government-s with the free economic conversioning proccess hence I understand that this is important & shall help accomplish this for what ever is cheap is a reasonable cost that we could sensible truely agree upon , like I'd do it for FREE if sensible enough possible { though since we ain't free yet & thus it is espected that this will likely cost (at least a little) time, effort & money acomplishing } !

Please (get) (congresses) help ! I James thanks whom ever truely is helped .
